Frame Cutout Instructions

Try it on, feel the fit and own the style.

Choosing frames is about more than just size, it's about finding the one that feels right on your face and fits your vibe.

Step 1:

For accurate results, print at 100% scale

Step 2:

Cut out the frames and hold them up to your face to see what works best.

Tip: For the best result, don't bend the paper.

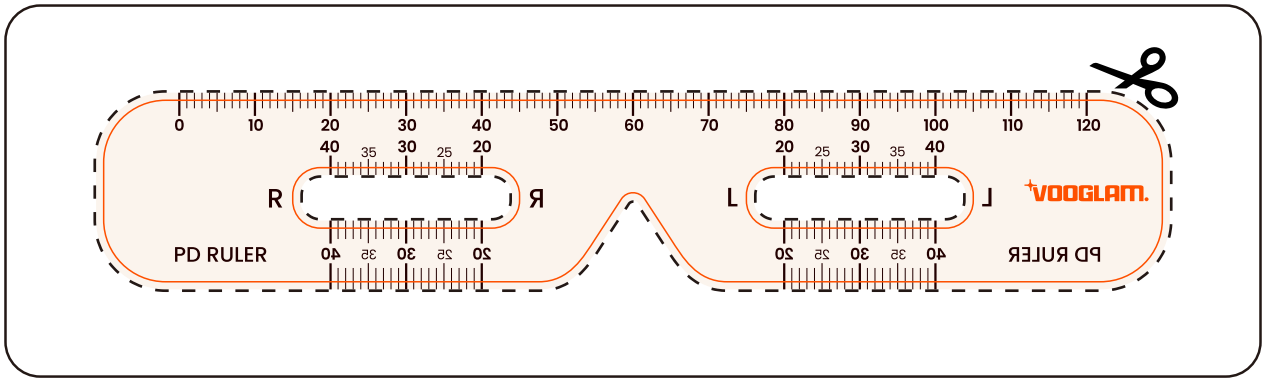

A credit card should fit in this box if printed to correct scale.

Step 3:

Got your size? Head to vooglam.com, use the size filter, and explore frames that match your look.

Don't Forget Your PD

To get your prescription glasses right, you'll need your PD (pupillary distance), that's the space between your pupils.
